

ZINi DMPS Dual Mode Picking System

DMPS (Dual Mode Picking System)

What is DMPS?

DMPS is a high speed picking/sorting system for the items in form of piece. This product is developed base on the advantages and disadvantages of existing DPC

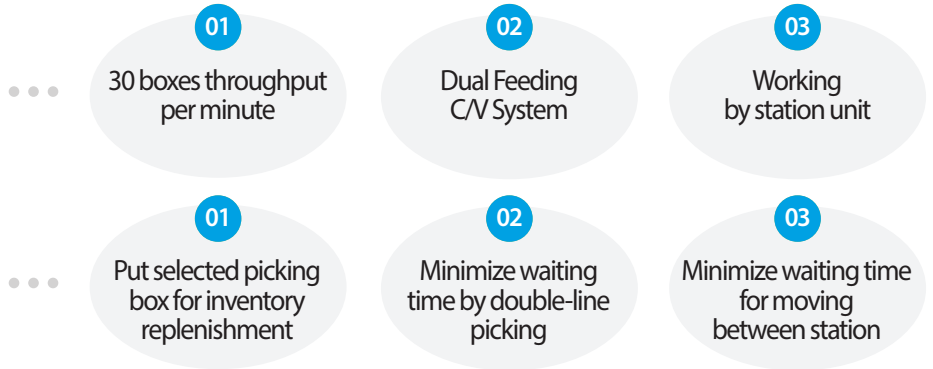

- ✓ Dual conveyor movement maximizes double sorting productivity
- ✓ Provide workforce efficiency by integrating picking and quality checking process
- ✓ Focus on quantity of picking station by load balancing technique of picking order Provide distribution function

ZINi DMPS Features

Utilizing dual C/V for high-speed picking

Smooth and continuous working

ZINi DMPS Working Process

ZINi DMPS Production Capacity

Type	B2B DMPS	B2C DMPS	Features
Customer(h)	420	1,800	
Number of lines (person/h)	255	380	

- Dual Box Transfer Conveyor
- Picking by station unit
- Complete processing by detection sensor
